

■ 100 Days SQL Journey

Day 01 - Getting Started with SQL

■ Today's Topic

SELECT, FROM and LIMIT

■ A Little Message for Today

Every big achievement begins with one small step. Today is not about being perfect—it's about beginning. Celebrate every query you write, because each one builds your confidence.

■ Quick Revision

SELECT chooses the data you want. FROM tells SQL which table to read. LIMIT controls how many rows are displayed.

Example:

```
SELECT * FROM employees;
```

■ Today's 5 SQL Missions

- Mission 1 (Very Easy): Display all columns from the employees table. (Hint: Use SELECT *).
- Mission 2 (Easy): Display all columns from the departments table.
- Mission 3 (Easy+): Display only first_name and last_name from employees.
- Mission 4 (Medium): Display the first 5 rows from the products table.
- Mission 5 (Challenge): Display the first 10 rows from the customers table.

■ Bonus Challenge

Display the first 15 rows from the orders table.

■ SQL Tip

Write SQL keywords like SELECT, FROM and LIMIT in UPPERCASE for better readability.

■ Tomorrow's Preview

Tomorrow you'll learn how to choose only the columns you need instead of displaying everything.

■ Git Commit Message

Completed Day 01 SQL Mission

■ Today's Progress

- Read Revision
- Mission 1
- Mission 2
- Mission 3
- Mission 4
- Mission 5
- Bonus Challenge

■ Closing Note

You're building a skill one query at a time. Stay consistent, enjoy the process, and come back tomorrow for the next mission. ■
