

📅 100 Days SQL Journey

Day 02

📅 Today's Topic

Using SELECT to choose specific columns and DISTINCT to remove duplicate values.

📅 A Little Message for Today

Every query you write strengthens your skills. Keep learning with patience—small wins today become big achievements tomorrow.

📅 Quick Revision

SELECT lets you choose specific columns instead of all columns. DISTINCT removes duplicate values.

Example:

```
SELECT DISTINCT city FROM customers;
```

📅 Today's SQL Missions

1. Display only department_name from departments. (Hint: Select one column.)
2. Display only product_name and price from products.
3. Display all unique city values from customers. (Hint: Use DISTINCT.)
4. Display all unique job_title values from employees.
5. Display only first_name, last_name, and email from employees.

📅 Bonus Challenge

Display all unique product categories from the products table.

📅 SQL Tip of the Day

Use DISTINCT only when you really need unique values.

📅 Tomorrow's Preview

Next you'll learn how to filter data using WHERE.
