

■ 100 Days SQL Journey

Day 10

■ Today's Topic

Review and strengthen your SELECT, specific columns, LIMIT, and DISTINCT skills.

■ A Little Message for Today

Ten days ago you started with your first query. Today you've built a solid foundation. Keep trusting the process—small daily wins lead to big achievements.

■ Quick Revision

Use SELECT to choose columns, DISTINCT to remove duplicate values, and LIMIT to control the number of rows returned.

```
SELECT DISTINCT city FROM customers LIMIT 5;
```

■ Today's SQL Missions

- Mission 1 (Very Easy): Display unique department names from the departments table. (Hint: Use DISTINCT.)
- Mission 2 (Easy): Display unique city values from the customers table.
- Mission 3 (Easy+): Display unique category values from the products table.
- Mission 4 (Medium): Display the first 5 unique employee job titles (or another repeating employee attribute if available) using DISTINCT and LIMIT.
- Mission 5 (Challenge): Display the first 10 unique customer cities using DISTINCT and LIMIT.

■ Bonus Challenge

Find another column in the database that contains repeated values and display only its unique values.

■ SQL Tip of the Day

Use DISTINCT only when you need unique values. It can reduce duplicate rows in your results.

■ Tomorrow's Preview

Tomorrow you'll begin one of the most important SQL topics: filtering rows with **WHERE**.
