

■ 100 Days SQL Journey

Day 11

■ Today's Topic

Introduction to the **WHERE** clause for filtering rows.

■ A Little Message for Today

You've built a strong foundation. Now you're learning how to ask SQL smarter questions by finding only the data you need.

■ Quick Revision

The **WHERE** clause filters records that match a condition.

```
SELECT * FROM employees WHERE employee_id = 1;
```

■ Today's SQL Missions

- Mission 1 (Very Easy): Display all details of the employee whose employee_id is 1. (Hint: Use WHERE.)
- Mission 2 (Easy): Display all products whose category is 'Electronics'.
- Mission 3 (Easy+): Display all customers who belong to the city 'Bangalore'.
- Mission 4 (Medium): Display all orders placed by customer_id 1.
- Mission 5 (Challenge): Display first_name, last_name and email of employees who belong to department_id 2.

■ Bonus Challenge

Choose any table and display only the rows where a numeric ID equals a value of your choice.

■ SQL Tip of the Day

Always test your WHERE condition carefully. A small typo can return no rows or the wrong rows.

■ Tomorrow's Preview

Tomorrow you'll combine multiple conditions using **AND**.

Completed Day 11 SQL Mission

■ Today's Progress

- Read today's revision
- Mission 1
- Mission 2
- Mission 3
- Mission 4
- Mission 5
- Bonus Challenge

■ Closing Note

You've taken the first step into filtering data. Keep practicing—this skill is at the heart of almost every SQL query you'll write.
