

■ 100 Days SQL Journey

Day 15

■ Today's Topic

Using **IN** to match multiple values.

■ A Little Message for Today

You're halfway through this SQL chapter. Each concept you master makes future topics easier to understand. Keep your streak alive!

■ Quick Revision

The **IN** operator checks whether a value matches any item in a list.

```
SELECT * FROM customers WHERE city IN ('Bangalore', 'Mumbai');
```

■ Today's SQL Missions

- Mission 1 (Very Easy): Display customers whose city is IN ('Bangalore', 'Mumbai'). (Hint: Use WHERE with IN.)
- Mission 2 (Easy): Display products whose category is IN ('Electronics', 'Furniture').
- Mission 3 (Easy+): Display employees whose department_id is IN (1, 2).
- Mission 4 (Medium): Display orders whose customer_id is IN (1, 2, 3).
- Mission 5 (Challenge): Display employee_id, first_name and last_name for employees whose department_id is IN (2, 3).

■ Bonus Challenge

Choose any table and write a query using IN with at least three values.

■ SQL Tip of the Day

Use IN instead of multiple OR conditions when checking the same column against several values.

■ Tomorrow's Preview

Tomorrow you'll learn how to filter ranges of values using **BETWEEN**.

■ Today's Progress

- Read today's revision
- Mission 1
- Mission 2
- Mission 3
- Mission 4
- Mission 5
- Bonus Challenge

■ Closing Note

Excellent work! You're becoming more comfortable expressing business questions in SQL. Keep practicing one day at a time.
