

■ 100 Days SQL Journey

Day 16

■ Today's Topic

Using **BETWEEN** to filter a range of values.

■ A Little Message for Today

Every new SQL keyword adds another useful tool to your toolbox. Keep practicing consistently, and you'll be surprised how much you've learned.

■ Quick Revision

The **BETWEEN** operator returns values within a specified range (inclusive).

```
SELECT * FROM products WHERE price BETWEEN 1000 AND 5000;
```

■ Today's SQL Missions

- Mission 1 (Very Easy): Display products whose price is BETWEEN 1000 AND 5000. (Hint: Use WHERE with BETWEEN.)
- Mission 2 (Easy): Display employees whose employee_id is BETWEEN 3 AND 8.
- Mission 3 (Easy+): Display customers whose customer_id is BETWEEN 2 AND 6.
- Mission 4 (Medium): Display orders whose order_id is BETWEEN 5 AND 15.
- Mission 5 (Challenge): Display employee_id, first_name and last_name for employees whose department_id is 2 AND employee_id is BETWEEN 2 AND 10.

■ Bonus Challenge

Choose any numeric column in the database and retrieve rows within a range using BETWEEN.

■ SQL Tip of the Day

Remember that BETWEEN includes both the starting and ending values.

■ Tomorrow's Preview

Tomorrow you'll combine everything you've learned so far to solve more realistic filtering challenges.

■ Git Commit Message

Completed Day 16 SQL Mission

■ Today's Progress

- Mission 1
- Mission 2
- Mission 3
- Mission 4
- Mission 5
- Bonus Challenge

■ Closing Note

Well done! You're becoming more confident with filtering data. Keep the momentum going—every day of practice makes you a stronger SQL developer.
