

■ 100 Days SQL Journey

Day 18

■ Today's Topic

Advanced filtering practice using WHERE, AND, OR, NOT, IN, and BETWEEN.

■ A Little Message for Today

You're no longer just writing SQL—you're learning to think like a problem solver. Every challenge you complete builds confidence for real-world data analysis.

■ Quick Revision

Complex business questions often require combining multiple filtering operators.

```
SELECT * FROM orders WHERE customer_id IN (1,2) AND order_id BETWEEN 5 AND 20;
```

■ Today's SQL Missions

- Mission 1 (Very Easy): Display employees whose employee_id is BETWEEN 4 AND 8.
- Mission 2 (Easy): Display customers whose city is NOT 'Bangalore'.
- Mission 3 (Easy+): Display products whose category is IN ('Electronics', 'Furniture') AND price BETWEEN 1000 AND 5000.
- Mission 4 (Medium): Display orders where customer_id IN (2, 3) OR employee_id = 1.
- Mission 5 (Challenge): Display employee_id, first_name and last_name for employees whose department_id IN (1, 2) AND employee_id NOT BETWEEN 1 AND 3.

■ Bonus Challenge

Create a query that uses at least three filtering operators together to answer a business-style question.

■ SQL Tip of the Day

Break complex conditions into smaller parts, then combine them one step at a time.

■ Tomorrow's Preview

Tomorrow you'll tackle mixed filtering challenges that prepare you for sorting data with ORDER BY.
