

■ 100 Days SQL Journey

Day 21

■ Today's Topic

Sorting data with **ORDER BY**.

■ A Little Message for Today

You've learned how to find the right data. Now you'll learn how to organize it. Small improvements like this make your SQL much more powerful.

■ Quick Revision

Use **ORDER BY** to sort query results. By default, SQL sorts in ascending order.

```
SELECT product_name, price FROM products ORDER BY price;
```

■ Today's SQL Missions

- Mission 1 (Very Easy): Display all departments sorted by department_name in ascending order. (Hint: Use ORDER BY.)
- Mission 2 (Easy): Display employees sorted by first_name in ascending order.
- Mission 3 (Easy+): Display products sorted by price from lowest to highest.
- Mission 4 (Medium): Display customers sorted by customer_name in alphabetical order.
- Mission 5 (Challenge): Display orders sorted by order_date in ascending order.

■ Bonus Challenge

Display employees sorted by last_name in ascending order.

■ SQL Tip of the Day

If you don't specify ASC or DESC, SQL uses ascending order by default.

■ Tomorrow's Preview

Tomorrow you'll sort data in descending order using **DESC**.
