

■ 100 Days SQL Journey

Day 27

■ Today's Topic

Using the single-character wildcard _ with **LIKE**.

■ A Little Message for Today

You're discovering that small SQL symbols can solve big problems. Stay patient, experiment with patterns, and enjoy each new skill you gain.

■ Quick Revision

The underscore (_) wildcard matches exactly one character. For example:

```
SELECT * FROM customers WHERE customer_name LIKE 'A_';
```

This finds two-letter names that start with A.

■ Today's SQL Missions

- Mission 1 (Very Easy): Display customers whose customer_name starts with 'A' and has exactly one more character. (Hint: LIKE 'A_')
- Mission 2 (Easy): Display employees whose first_name has exactly five characters. (Hint: Use five underscores.)
- Mission 3 (Easy+): Display products whose product_name starts with 'S' followed by exactly one character and then any remaining characters.
- Mission 4 (Medium): Display departments whose department_name has 'e' as the second character.
- Mission 5 (Challenge): Find customers whose city starts with 'B', has exactly one unknown character, and then any remaining characters.

■ Bonus Challenge

Choose any text column and write a LIKE query that uses both _ and % together.

■ SQL Tip of the Day

% matches zero or more characters, while _ matches exactly one character.

■ Tomorrow's Preview

Tomorrow you'll combine different LIKE patterns to solve more realistic search problems.

■ Git Commit Message

Completed Day 27 SQL Mission

■ Today's Progress

- Read today's revision
- Mission 1
- Mission 2
- Mission 3
- Mission 4
- Mission 5
- Bonus Challenge

■ Closing Note

Wonderful progress! Every day you practice, SQL becomes a little more familiar. Keep your curiosity alive and continue building your skills one query at a time.
