

■ 100 Days SQL Journey

Day 31

■ Today's Topic

Introduction to the **COUNT()** aggregate function.

■ A Little Message for Today

You've reached a new milestone! Today you'll learn how SQL can summarize data instead of showing every row. Small steps lead to powerful skills.

■ Quick Revision

COUNT() returns the number of rows or non-NULL values in a column.

```
SELECT COUNT(*) FROM employees;
```

■ Today's SQL Missions

- Mission 1 (Very Easy): Count the total number of employees in the employees table. (Hint: Use COUNT(*).)
- Mission 2 (Easy): Count the total number of departments.
- Mission 3 (Easy+): Count the total number of products.
- Mission 4 (Medium): Count the total number of customers.
- Mission 5 (Challenge): Count the total number of orders.

■ Bonus Challenge

Choose any table and count the values in one specific column using COUNT(column_name).

■ SQL Tip of the Day

Use COUNT(*) when you want to count rows regardless of column values.

■ Tomorrow's Preview

Tomorrow you'll learn how to add numbers together using **SUM()**.

■ Closing Note

Fantastic work! You're beginning the world of SQL aggregation. Keep practicing every day, and you'll soon be turning raw data into meaningful insights.
